

FOLEX NEW ON WWW.PHABULOUS.EU

Since 2022 Folex is actively participating in the project PHABULOUS, a networking resource that aims to support the joint development of UV-Imprinted technologies in Europe. Within the network there are companies and institutes that provide all the services required for UV-imprinting starting with the design and manufacturing of nano- and micro-structured tools, all the way over to industrial production (replication) of patterned films in large volumes. The latter is, of course, the service that Folex is providing as a professional coating company. The range of applications of such structured surfaces is large and comprises decorative surfaces (color effects), optical surfaces (light guiding), micro-fluidic applications etc. etc.

Check out the PHABULOUS website to learn more about this fascinating technology at www.phabulous.eu Click here for the Folex-entry: [R2R UV-Imprint Manufacturing | Marketplace | PHABULOUS Ecosystem](#)
